

NEW! ULTIMATE SLIDE BOLT ASTRAGAL WHAT HAS CHANGED?

The NEW! Ultimate Slide Bolt Astragal is one of two alternatives to the previous Ultimate Astragal design. With an 18" sliding bolt featuring a unique ratchet mechanism and the Floating Boot System, the Ultimate Slide Bolt Astragal provides smooth operation, enhanced security and superior sealing.

WHAT HAS CHANGED?

STREAMLINED APPEARANCE

OLD: The upper bolt was visible, resulting in unsightly gaps between the bolt and the trim strip when the bolt was engaged.

NEW: The upper bolt is concealed by the trim strip and features a clean cutout to operate the bolts.

BENEFIT: Astragal delivers enhanced security with improved operation.

EASIER INSTALLATION

OLD: Bolts required removal for installation.

NEW: With new design, bolt removal is no longer required.

BENEFIT: Astragal installation is easier and takes less time.

IMPROVED OPERATION

OLD: Sliding bolt required an additional step to lock.

NEW: Sliding bolt now features a unique ratchet mechanism that auto-locks to secure the door unit.

BENEFIT: Astragal delivers enhanced security with improved operation.

REDUCED JOB SITE WASTE

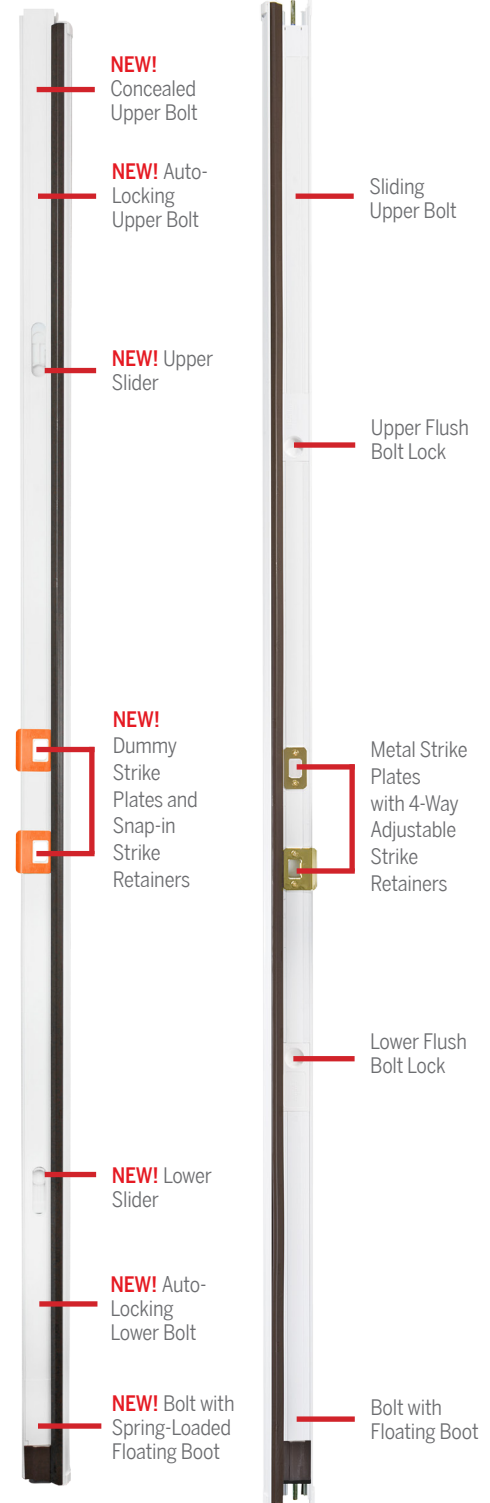

OLD: Metal Strike Plates were pre-installed on the astragal, which were often replaced to match final hardware.

NEW: The Ultimate Slide Bolt Astragal now features Dummy Strike Plates intended for replacement.

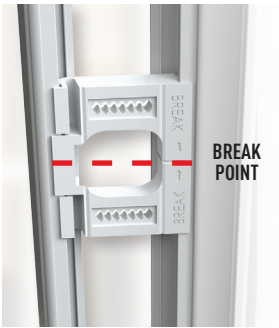

BENEFIT: Jobsite waste is minimized and customization is better supported.

NEW

OLD

NEW! ULTIMATE SLIDE BOLT ASTRAGAL WHAT HAS CHANGED?

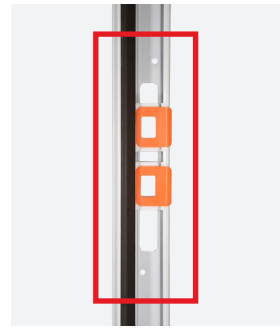

CUSTOMIZABLE HARDWARE

OLD: Resizing strike retainers required cutting and additional tools.

NEW: Without additional tools, strike retainers are easy to remove and resize using built-in break points.

BENEFIT: Resizing and repositioning strike retainers to meet varying hardware needs is faster and easier than ever.

SIMPLIFIED DESIGN

OLD: Astragal featured an internal strike support for additional strength.

NEW: Strike support has been eliminated while maintaining the integrity of the astragal.

BENEFIT: Simplified internal design delivers easier maintenance and part replacement in the field.

BETTER PERFORMANCE

OLD: The Floating Boot and Bolt operated as a single mechanism.

NEW: Floating Boot is now spring-loaded and acts independently from the bolt.

BENEFIT: Boot automatically adjusts forming a tight seal against the sill cap, even in imperfect conditions.
